- **Repository Storage Space Worflow***

  Workflow which reduces costs by limiting the amount of data to be imported into the review software platform

- **Branching Out**

  When you have a data source that may be common to multiple DSARs, take advantage of the ability to branch out multiple sub platforms from a

- **Privacy support**

  Our best-in-class add on service to help your organization with data privacy related issues.

* Repository Storage Spaces act as holding areas for larger volumes of data. With more limited functionality, Repository Workspaces are used to minimise the amount of data to be promoted to the review workspace. These workspaces are charged at a lower rate to ease large volumes of data.

** Client Domain Subscriptions include the onboarding and support of the BSI eDiscovery team to assist in creating their customised workspace templates and allow Domain Administrators to become comfortable in carrying out common administrative tasks such as: customizing permissions, creating workspaces, managing users, data processing, document imaging and final productions.
